Summary

Computer Science graduate focused on machine learning using Python and AI-driven automation, with experience in data preprocessing, feature engineering, model training, and system integration. Strong frontend foundation in JavaScript, React, and TypeScript, building performant, user-centric interfaces that connect seamlessly with intelligent back-end workflows.

Experience

Brackets October 2024 - December 2024
Frontend Intern Gujranwala

Responsibilities:

- Built responsive user interfaces using HTML, CSS, JavaScript, React, and TypeScript, ensuring cross-browser compatibility.
- Integrated tools like Tailwind CSS, Redux Thunk, and Yup for efficient styling, state management, and form validation.
- Enhanced website performance and accessibility for mobile and medium screens with optimized layouts and UI/UX best practices.
- Implemented dynamic data fetching, validation, and CRUD operations, ensuring seamless functionality across projects.

Projects

Fake News Detection System

[Link](#)

- Developed an ASP.NET application (newsannotate) for annotating news data by true/false and categories, resulting in a structured dataset for model training.
- Achieved an 88% accuracy in fake news detection by preprocessing data and using Python to implement Logistic Regression, SVM, Naive Bayes, and an Ensemble Model.

Technologies Used: ASP.NET Framework(For Data Annotation), Python, pandas, scikit-learn

Machine Learning, Data Collection, Data Cleaning and Preprocessing

Data-Driven Analysis of Pakistan Real Estate

[Insights_Report](#)

- Worked on EDA and multivariate analysis using a real estate dataset
- Explored missing values, outliers, correlations, and how multiple features together impact property prices.

Technologies Used: Python, pandas, numpy

EDA, Multivariate Analysis

Blog and Podcast Platform

[Link](#)

- Engineered a React.js blog platform with Firebase integration, implementing user authentication and protected routing to ensure secure content access and management.
- Additionally, I developed a subscription-based podcast feature using Stripe payment integration, achieving revenue generation through premium content delivery.
- Furthermore, I integrated Lexical rich text editor for content creation and implemented real-time updates using Firebase, resulting in an enhanced user experience.
- I built a responsive interface using Tailwind CSS and TypeScript, ensuring cross-device compatibility and type safety throughout the application.

Technologies: React.js, TypeScript, Firebase, Stripe, Tailwind CSS, Lexical Editor, Zod, Yup.

Education

University of the Punjab (Gujranwala Campus)

Computer Science

2.95

Dec 2020 – June 2024

Bachelor's

Certifications

AI Bootcamp

Nov 2025 - Ongoing

Atomcamp

- Currently enrolled in an AI bootcamp, learning data cleaning, EDA, and feature engineering to extract meaningful insights.
- Building and evaluating ML models using metrics like ROC-AUC, precision/recall, and R^2 .
- Developing skills to translate business problems into explainable, data-driven ML solutions.
